# Pfizer COVID-19 Disease Burden on the Pediatric Population

**Due: July 17, 2025**

**Full Proposal link: [2025 VAC US COVID-19 Burden on the Pediatric Population KG](#)**

Amount: \$150,000

Duration: One year

Eligibility: Healthcare institutions, medical, allied health and/or pharmacy professional schools, professional organizations/medical societies, medical education companies.

## Summary

Pediatricians, primary care providers, and pediatric infectious disease specialists all play a critical role in identifying, assessing, and managing high risk pediatric patients with COVID-19. To effectively do so, they must be equipped with a comprehensive understanding of the clinical presentation and overall impact of COVID-19 on the pediatric population. Providers need to stay up to date with ongoing research and the latest evidence-based approaches to care to ensure optimal patient outcomes.

## Area of Interest

Identify pediatric patients at high risk for developing severe COVID-19 outcomes, including hospitalization or death, and are designed to help achieve the following goals:

- Improve identification of pediatric patients with high-risk conditions and their eligibility for COVID-19 treatment.
- Recognize the importance of early COVID-19 intervention/treatment in high-risk pediatric patients.
- Outline COVID-19 complications associated with high-risk conditions and the impact they have on pediatric patients and healthcare systems.
